

I am an XM radio subscriber and want my traffic and weather reports on XM. XM gives continuous updates and provides a valuable service. I pay for Xm and can not understand why Congress is getting involved in this issue. If we are a free and capitalist society I see no need for satellite radio to be singled out and censored for providing a service to the paying public. Using the same logic satellite radio can be banned from providing classic rock music because a certain over-the-air station provides classic rock. Please stop being pawns of the NAB and their lobbyists and begin opening up the airwaves to ALL voices, including low-powered community FM radio.
